YUNEMOZ TOKEN

Blockchain Systems

Our purpose is to develop a blockchain network. This blockchain network is eco-friendly because nodes are smartphones. They don't have to download the all network data to their devices to do this. They only need to maintain an up-to-date summary of all network data. Also, the algorithm will always be easy. Well, if the algorithm is always easy, the profit decrease a lot when miner availability increases? No.

For example, algorithm always gets harder in bitcoin network. Due to the difficult algorithm, energy consumption and machine costs increase. Because of this increase, the earnings will eventually be less than the costs. so miners start leaving the system. As the available miners decrease, the algorithm becomes easier and the miners start to make more profit. Clever design. But this system of paradox is very dangerous when miners are crowded. Energy and equipment are important.

However, the algorithm is always easy in the Yunemoz Blockchain Network. If miners are crowded, profitability decreases. Because all miners share the same profit because of the same easy algorithm. Because of low profits, miners start to exit the system. So mining becomes profitable again.

Both processes have the same result. But nature also profits in Yunemoz Blockchain design.

Artificial intelligence

Think of an AI that runs on a blockchain network. In this way, it is fed with an endless and unchangeable data. What do you think of its success? It's true. It's great to have a servant who is more successful every day. But that's not the important question. Important question is "how many submissive?".

YUNEMOZ project has been working on this issue for a long time.

Automated Cryptocurrency Trading

YUNEMOZ project is also working on very effective trading bots that work on some major cryptocurrency exchanges. These trading bots mostly work on futures trading. Thus, more investment opportunity with less capital. This situation can be risky. Because there is a liquidity problem in leveraged trading. This problem will always exist. But our trading bot algorithms and artificial intelligence algorithms that we have developed overcome this problem.

We can also encode or publish your trading bot algorithm requests sent to us by you.

Giveaway and Prize Distribution Tool

EOZ token, also developed for entrepreneurs, can be used as a reward and giveaway distribution tool in various projects.

EOZ token decimal value is zero. Therefore, you can have at least 1 EOZ token. This like game tokens, isn't it?

Yunemoz continues to work on its own game project. Our aim is to distribute gift tokens to people by a game project. In this way, we aim to be a pioneer in the use of EOZ tokens as giveaways.

Why Decentralization?

Decentralized, blockchain-based protocols are poised to tear down the exclusionary, monolithic foundations of traditional finance, radically reconfigure how money is used, created, and distributed, and build a superior, more transparent, and equitable financial system on top of its ruins.

Why Cardano?

Cardano's vision, mission and work to building scalable, user-centric blockchain solutions are perfectly aligned with YUNEMOZ's requirements.

Cardano is the first blockchain platform to evolve out of a scientific philosophy and a research-first-driven approach.

First-generation blockchains like Bitcoin were the first to offer the world decentralized ledgers for secure cryptocurrency transfers. However, they did not create a functional environment for developing more complex smart-contract-based financial solutions.

Second-generation blockchains like Ethereum introduced smart-contracting capabilities to blockchains but are unfortunately suffering from significant scalability issues.

On the other hand, Cardano is conceived as a more evolved, future-proof third generation blockchain that combines the former's properties and evolves to meet all its users' arising needs

To Do List

- ☑ ~~Website launch~~
- ☑ ~~Marketing push~~
- ☑ ~~Weekly giveaways live on Telegram~~
- ☑ ~~Expansion of core team~~
- ☑ ~~Nurture established social media channels~~
- ☑ ~~Collaborations with different projects~~
- ☐ Presale announcement
- ☐ TechRate audit
- ☐ MuesliSwap verification
- ☐ Community grow
- ☐ Telegram group with 5K members
- ☐ Dextools, Coinhunt,Coinsniper etc
- ☐ CoinMarketCap and CoinGecko listing
- ☐ First Collection of EOZ NFTs
- ☐ Giveaway distribution via some web applications
- ☐ 20.000 Holders
- ☐ First exchange listing
- ☐ Expansion of core team
- ☐ Investing in trading bots and artificial intelligence algorithms
- ☐ Testing of developed algorithms and digital products (Beta)
- ☐ Opening access to eoz token holders to developed products
- ☐ Investing in a new mobile blockchain network
